

Ideation Phase

Brainstorm & Idea Prioritization Template

Field	Value
Date	30 September 2026
Team ID	
Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Maximum Marks	4 Marks

Brainstorming provides a free and open environment that encourages creative thinking that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon. Even for an individual project, brainstorming was conducted as a self-driven exercise — listing every idea freely first, deferring judgment, then grouping and prioritizing them objectively.

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Before you collaborate

As this is an individual project, the brainstorming session was conducted as a structured self-brainstorm: ideas were first written down freely without judgment (quantity over quality), then reviewed, grouped, and prioritized. The key brainstorming rules were still followed:

-  Stay on topic
-  Encourage wild ideas
-  Go for quantity
-  Defer judgment
-  Be visual
-  Everyone participates (here — full ownership by the individual)

Define your problem statement

Problem Statement:

Patients visiting medical diagnostic centers face long queues, manual paperwork, repeated physical visits for booking tests and collecting reports, and lack of visibility into their test status. Receptionists and lab technicians rely on manual registers, causing duplicate bookings, missed slots, slow report delivery, and no centralized data for management decisions. There is a need for a centralized, automated digital platform where patients can register, book diagnostic tests, track status, and download reports, while staff can efficiently manage bookings, reports, and operations.

Step 2: Brainstorm, Idea Listing and Grouping

Brainstorm

Individual ideas listed freely during the brainstorm:

#	Idea
1	Online patient registration & profile management portal
2	Real-time diagnostic test catalog with prices & preparation instructions
3	Online test booking with calendar and time-slot selection
4	Real-time slot validation to prevent duplicate/overbooked slots
5	Automated booking confirmation via email notification
6	Digital test status tracker (Requested → Sample Collected → Processing → Completed → Delivered)
7	Online report upload by technician & digital report download by patient
8	Automated report-ready notification to patient
9	Role-based access for receptionist, lab technician, doctor, admin

#	Idea
10	Online payment with auto fee calculation (test type × urgency)
11	Digital invoices and payment receipts
12	Reschedule/cancel appointment option in portal
13	Admin dashboard — tests per day, revenue by test type, peak hours
14	Most-requested tests analytics for equipment planning
15	Priority handling for urgent/STAT test requests
16	Centralized patient test history & records
17	Query/help desk — patients raise questions in portal
18	Reduce paper registers — fully digital records (sustainability)

Group Ideas

Group	Umbrella	Idea #s
A	Patient Access & Registration	1, 12, 16, 17
B	Test Booking & Scheduling	2, 3, 4, 5, 15
C	Report & Status Management	6, 7, 8
D	Payments & Billing	10, 11
E	Staff, Security & Administration	9, 18
F	Analytics & Reporting	13, 14

Step 3: Idea Prioritization

Prioritized on the impact/feasibility map. Items in the **upper right** are go-forward items.

Impact vs Feasibility Map

Axis	Feasibility: Low	Feasibility: High
Impact: High	Online payment integration (10, 11)Advanced analytics dashboards (13, 14)	★ Online registration & test booking (1, 2, 3, 4, 5)★ Status tracking & digital reports (6, 7, 8)Role-based access (9)Reschedule/cancel (12)
Impact: Low	STAT priority handling (15)	Query/help desk (17)Centralized test history (16)Paperless records (18)

Go-Forward Ideas (High Impact, High Feasibility)

1. Patient registration & profile management via Service Portal
2. Diagnostic test catalog with real-time availability
3. Online test booking with time-slot validation (prevents duplicates)
4. Automated email confirmations & notifications
5. Digital status tracking (Sample Collected → Processing → Completed → Delivered)
6. Report upload & digital download
7. Role-based access control for staff

Deferred / Phase 2 Ideas

- Online payments & invoicing (optional/phase-based per business objectives)
- Advanced analytics & dashboards
- STAT/urgent priority workflow
